

**IMPLANTABLE MEDICAL DEVICE WITH DETACHABLE
BATTERY COMPARTMENT**

Abstract of the Disclosure

5

An implantable medical electronic tissue stimulating device is formed of two hermetically sealed, fluid impervious housings, one containing an electronic pulse generator and the other a battery power supply. The two are adapted to be mechanically and electrically coupled together through a coupler/connector whereby 10 current from the battery in one sealed housing is fed to the electronic pulse generator in the other sealed housing.
